

MEET THE HOUNDS

ON THE SCENT

Unknown-Unknowns Dashboard

The Pack's Trail · Category: Correlation

"The one page that shows what you're not seeing."

Every hound's findings converge on one trail — the daily view of the exposure you didn't know you had.

THE PROBLEM

Each specialist agent answers its own question brilliantly — but a CISO doesn't want fifteen answers, they want one picture. Without a converging view, the most dangerous category of risk survives: the unknown-unknowns nobody thought to ask any single tool about.

WHAT IT DOES

On the Scent aggregates every agent's findings into a single **"Exposure at a glance"** page — a ranked view plus category tiles covering the whole pack's territory. Click any bar to drill into the Dashboard builder. It's the daily executive view: what the pack found, ranked by what matters, on one page.

KEY CAPABILITIES

- **Exposure-at-a-glance ranked view** — every category of finding across the whole pack, ordered by significance on one screen. The morning read that replaces fifteen tool logins.
- **Category tiles** — KEV, identity, crypto, AI, IoT, EOL and more, each tile a doorway into its specialist's full detail. Executive summary on top, evidence one click down.
- **Click-to-drill into the Dashboard builder** — any bar becomes a working query, so "what's behind that number?" is answered by exploring, not by filing a request.
- **Unknown-unknowns framing** — the page is organized around what you're *not* seeing, surfacing the risk categories nobody thought to ask any single tool about.

HOW IT WORKS

On the Scent consumes the findings of every producer agent in the pack — all running against the same local navi.db — and renders them as one ranked, tiled exposure view. It's a reader, not a writer: the view changes when the estate does.

WHY IT'S DIFFERENT

- **One page, whole pack** — the correlation payoff of fifteen specialists without opening fifteen tools.
- **Built for the morning glance** — ranked and tiled for a daily read, not another dashboard nobody opens.
- **Honest by inheritance** — every number on the page carries its source agent's evidence and coverage caveats.

PROOF POINTS

In a reference environment of 268 assets, one page rolls up:

- **2,631** KEV findings (Laelaps) · **63** reachable attack paths (Fenrir) · **44** AI assets (Pythia) · ~100% quantum-vulnerable certs (Heimdall) — each tile one click from its evidence.

Illustrative demo-lab context — not a guarantee. The view is only as complete as scan coverage; blind and uncredentialed hosts are called out, not hidden.

WORKS BETTER WITH

On the Scent consumes **every producer agent** in the pack — it's where Laelaps, Fenrir, Janus, Heimdall, Pythia, Mimir, and the rest converge into the daily executive view.

WHO IT'S FOR

CISOs who need the estate on one page; vulnerability management leads running the morning stand-up; anyone building executive reporting that survives questioning.

CALL TO ACTION

Open On the Scent tomorrow morning — and see what you weren't seeing.
